REPORT GLOSSARY

- **Median:** Like an average, but accounts for outlying results so the final number isn't skewed.
- **No cuts or adulterants detected:** This does not mean these samples were "pure", impurities likely exist at concentrations below our limits of detection.
- **No actives detected:** We could not detect any active ingredients within our PSMS target list.
- **Percentages:** Represents the amount per 100 mg. Example: a concentration of 12% fentanyl is 12 mg of fentanyl per 100 mg (a point) of the total sample (including other components like cuts).
